Introductory note

This introductory note does not form a part of the notice

The following notice gives notice of the variation of an environmental permit.

This variation is made for the addition of a new finishing shed within the existing installation boundary, located to the north east of the existing sheds. The shed is a fully slatted ACNV ventilated block built building with side ventilation which is the same as the existing buildings.

Following the recent clarification regarding gilts that served gilts should be counted as sows and not served gilts should be counted as production pigs for the purposes of calculating stock numbers, the permit holder has confirmed that this has meant an increase in sow numbers. The total number of sows has been increased to 646.An assessment of the effect of this increase to overall ammonia emissions from the installation has indicated that the increase of emissions will be less than 10%.

The schedules specify the changes made to the original permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
