### **Introductory note**

#### ***This introductory note does not form a part of the permit***

The main features of the installation are as follows.

The Ecclesfield Waste Treatment Facility is operated by Waste Recycling Limited, which is part of the Waste Recycling Group (WRG). The permitted installation covers an approximate area of 1.17 hectares and is located in Ecclesfield, approximately 6km to the north of Sheffield city centre and 1km to the west of the M1 motorway. The installation is located in an industrial estate, the nearest area of residential property is situated approximately 100m to the south. Two sports grounds/recreational areas are located approximately 150m to the south and the west of the installation; a railway line lies approximately 125m to the north-east.

A tributary of Blackburn Brook flows along the southern boundary of the site from west to east. Blackburn Brook is a tributary of the River Don. The installation has one emission to sewer, which is treated at the Blackburn Meadows Sewage Treatment Works (STW), operated by Yorkshire Water Services Ltd. Following final effluent treatment, the STW discharges to the River Don.

The permitted installation principally functions as a liquid waste treatment plant, processing acid/alkali wastes, oil/water mixtures and simple wastes (such as landfill leachate) using a variety of processes including filtration, neutralisation, precipitation and adsorption. The installation also takes a wide range of packaged wastes, which are either entered into the treatment process or stored for transfer to another facility. The installation essentially consists 5 bulk liquid waste treatment tanks, 2 treated effluent tanks, 3 sludge tanks, an acid storage tank, a lime silo and mixing tank, a reactor tank, a "smalls" mixing tank, a waste oil tank, storage areas for drums and IBCs, and equipment for the shredding, crushing and compaction of drums. The installation also includes a filter press house (containing 4 filter presses), a laboratory, a weighbridge, vehicle wash-out ramps, a diesel fuel tank, and a skip park for the storage of crushed drums. At the time of permit determination the installation also used two underground sumps for the reception of bulk liquid wastes.

The installation has 5 point source emissions to air. There is one vent on the lime silo, two vents from the sludge tanks, one combined emission from the acid storage tank and reactor tank, and one emission from the "smalls" mixing tank. The lime silo vent is fitted with a bag filter abatement system. Vapours from the acid storage tank and reactor tank are released to atmosphere via a wet scrubber abatement unit, and both vessels are fitted with vapour balance lines. Vapours from the "smalls" mixing tank also pass through a wet scrubber before being released to atmosphere. Both scrubber units are force-draught. The vents on the sludge storage tanks are unabated.

The installation does not have a direct emission to controlled water. All site drainage is self-contained and directed through the waste treatment process provided at the installation.

The surface of the site is generally flat and is made up of impermeable concrete pads that are 200mm thick, with the exception of the peripheral grassy areas. The impermeable areas of the site are edged with kerbing (150mm) and all storage and treatment tanks are contained either within a individual bund (of 110% capacity) or a bunded area with a holding capacity that can take 110% of the largest tank.

The Waste Recycling Limited has implemented an Environmental Management System at the Ecclesfield Waste Treatment Facility that has been externally assessed and verified as meeting the requirements of ISO14001. The COMAH regulations do not apply at the installation.
