Introductory note

This introductory note does not form a part of the notice

The following notice gives notice of the variation of an environmental permit.

This variation updates the existing permit by replacing emission monitoring points W1 and W2 with only one emission monitoring point W1. This permit is also amended to include the Surface Water Protection System (SWPS) holding chamber. The SWPS is a pollution prevention measure that continuously monitor surface water drainage in real time and can re-direct contaminated water away from the receiving dyke if pollutants are detected. Within the chamber installation, W1 outlet is permanently closed. This allows for test on the water in the chamber with the ability to either divert the water to an onsite waste water treatment plant for treatment or controlled release to the dyke through the single exit pipe.

The schedules specify the changes made to the original permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
